

## STAR MAX-GRIP

### Advanced Additive for Superior Sealcoating Performance

**STAR MAX-GRIP**, an advanced additive that delivers more than just fast-drying. It is designed and engineered to significantly enhance the adhesion of sealcoatings to pavement surfaces. It also boosts resistance to oil, gasoline and other petrochemicals.

Three critical factors in extending the longevity and durability of sealcoatings

- **Stronger Bonding** – Made with specialty engineered polymers to enhance adhesion of the sealcoating to the pavement for a longer-lasting finish.
- **Fast Drying** – MAX-GRIP simplifies the application process, reducing downtime and labor costs. Highly effective in high-traffic areas like driveways, parking lots, and airport tarmacs, where performance and turnaround time are crucial.
- **Tougher Resistance** – It ensures the sealcoated surface is highly resistant to shield against oil and fuel drip, extending the protective benefits of any sealcoating job.

With **MAX-GRIP**, contractors and maintenance professionals can expect sealcoated pavements to bond more securely, cure faster, and better withstand harsh environmental and traffic-related conditions.

**MAX-GRIP** can be used with all types of conventional sealcoatings, Coal Tar, Asphalt and Specialty petroleum based. Ideal for use in a wide range of commercial and residential applications.

**MAX-GRIP** can be used with all STAR additives; Macro-Flex, Max-Dri, Advantage-4, and LTCA.
